**DECEMBER 2021** 

COVID VACCINE FACTS FOR NURSES

COVID VACCINE FACTS FOR NURSES

# Impact Report

INTRODUCTION

With support from Johnson & Johnson and the American Nurses Foundation, the American Nurses Association formed a collaboration with 21 nursing organizations to share common and scientifically-accurate messages about COVID-19 vaccinations.

The digital campaign, COVID Vaccine Facts for Nurses (CVF4N), armed American nurses with the latest facts and information, empowering them to educate their vaccine-hesitant co-workers, patients, families, and communities about the importance of receiving a COVID-19 vaccine.

"The collaboration between the nursing organizations has been effective in addressing the needs of the collective patient community."

# What collaborators have stated about the campaign:

"Highlighting the work of each organization related to COVID has been helpful. Learning from the different specialties has also been beneficial."

"A positive opportunity for our organization to demonstrate commitment to advocacy on behalf of nurses – also, the opportunity to partner with the wider nursing community."

"The program assets have absolutely been useful! Having the assets provided by ANA and the agency has been essential to the campaign's success. It is great to have packaged content for social (especially where we can add our own logos)."

# **Collective Goals**

Increase COVID-19 vaccine adoption among vaccine-hesitant nurses

Mobilize nurses to share vaccine information with patients, particularly in communities of color

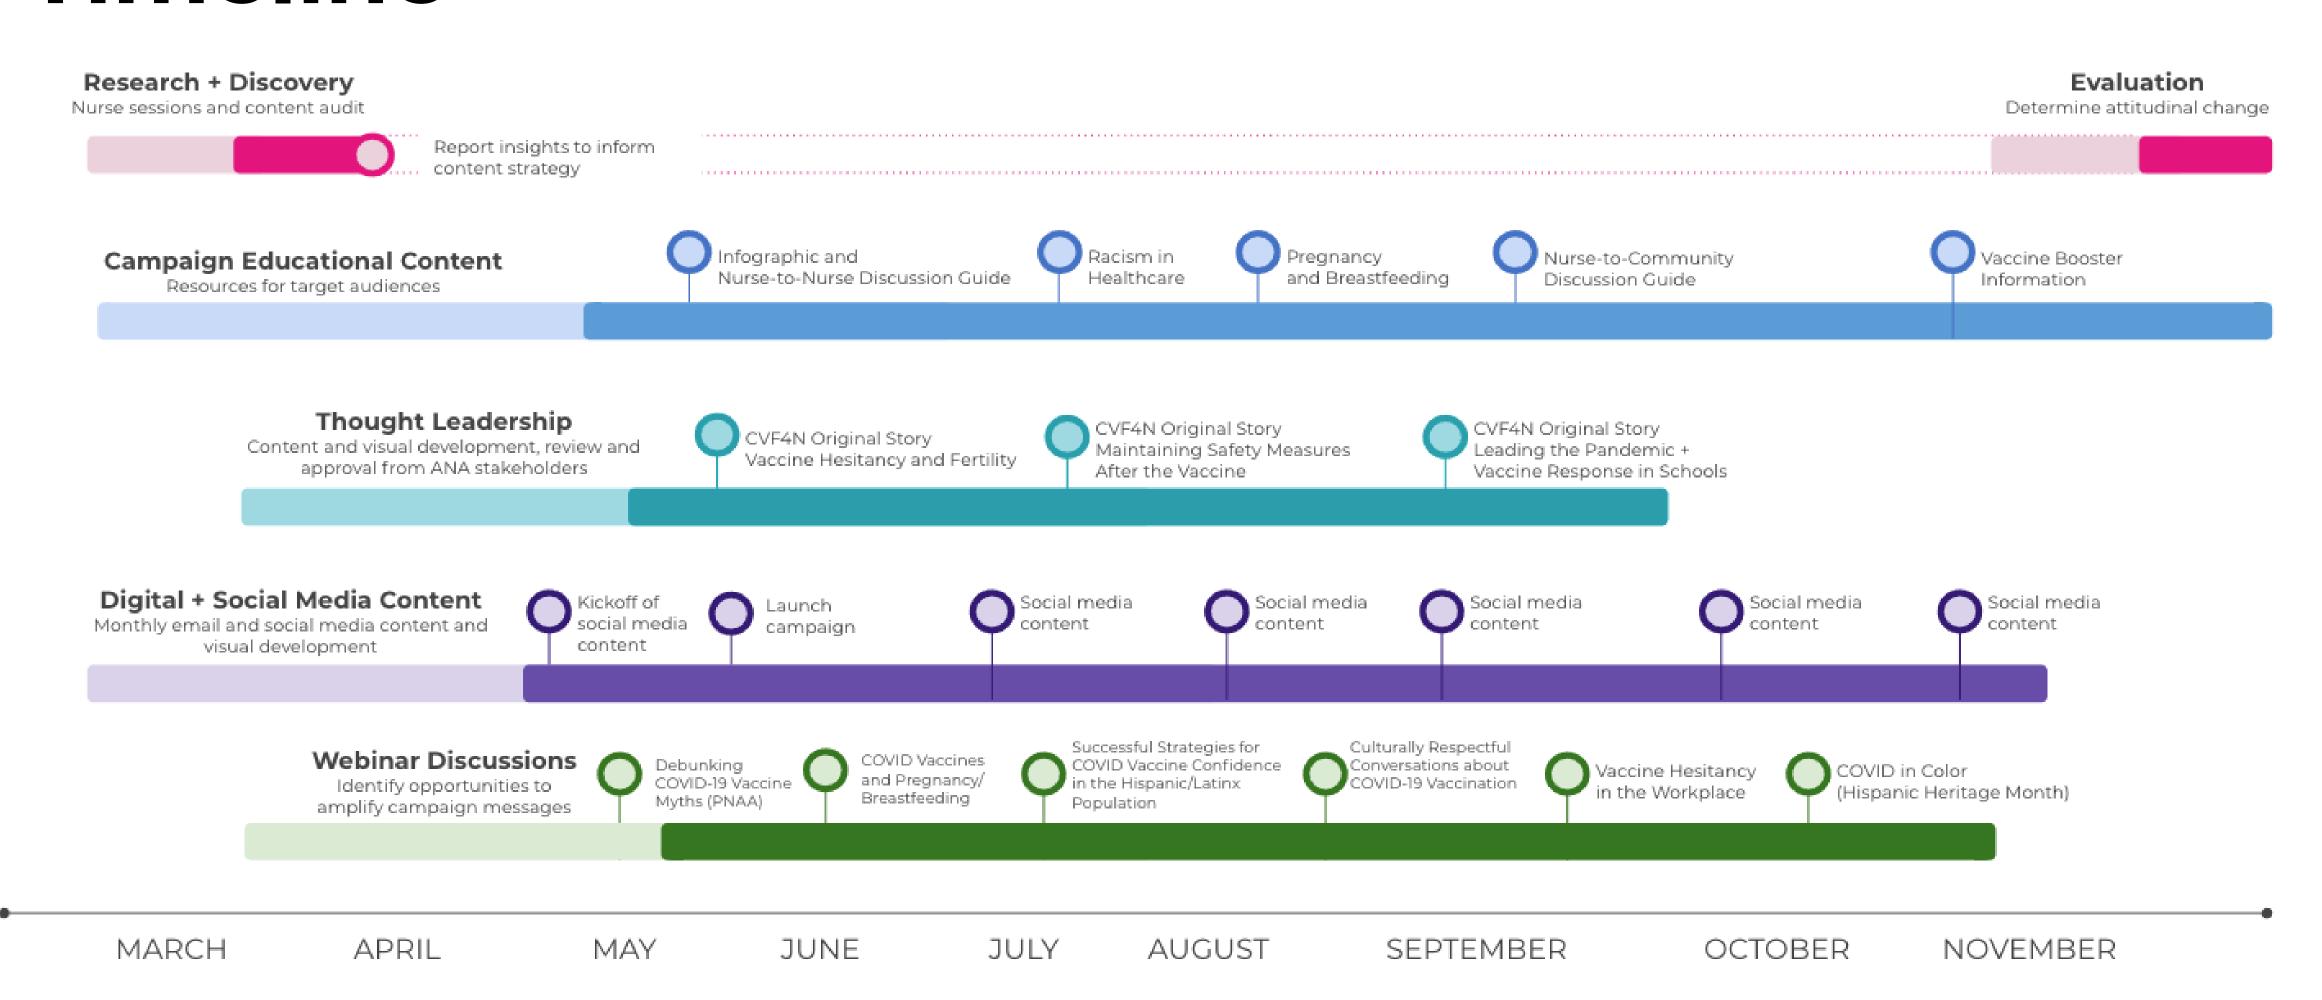

Position the COVID Vaccine
Facts for Nurses (CVF4N)
campaign as the premier
source for reliable COVID-19
vaccine information for nurses

Break through the clutter and misinformation about the COVID-19 vaccine in social marketing directed at nurses

**INTRODUCTION** 

# Timeline

**SUCCESS SNAPSHOT** 

Through a multi-channel communications strategy, prioritization was placed on key digital platforms to elevate campaign messages, shifting content to meet rapidly evolving changes in COVID-19 vaccine information and addressing nurses' concerns.

#### STRATEGIC PHILOSOPHY

#### Listen

Use surveys, town hall meetings, and other mechanisms to actively identify and rapidly address concerns from the nursing community.

#### **Educate**

Provide materials for nurses to use in educating themselves, their patients, and their communities on the COVID-19 vaccines. Particular attention to addressing the needs of at-risk communities.

#### Share

Collaboratively provide key open-source resources with nurses and organizations in user-friendly environment.

### **Amplify**

Exponentially increase the reach of educational materials related to the vaccines. Build reach and engagement across the nursing community.

**SUCCESS SNAPSHOT** 

# Campaign Dashboard

**AUDIENCE SPOTLIGHT** 

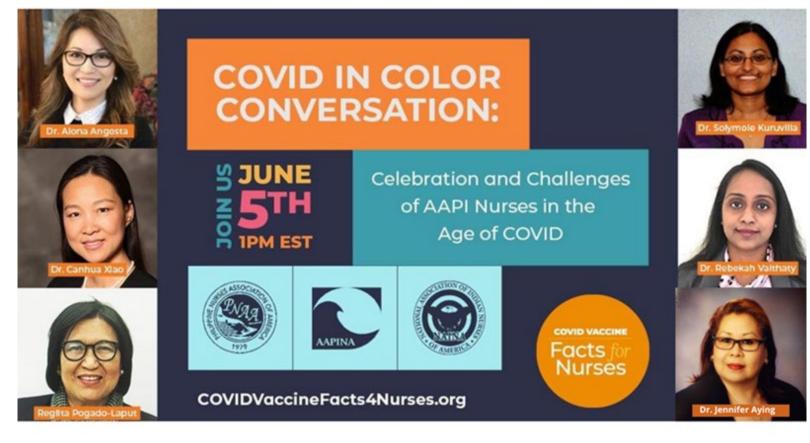

# Reaching BIPOC Nurses

One of the key goals of the COVID Vaccine Facts for Nurses campaign was to reach Black, Indigenous and People of Color (BIPOC). To this end, 8 nursing organizations – representing 36,500 members – joined the collaboration.

The campaign honored these organizations by hosting COVID in Color Conversations on how the pandemic affected their populations. Six out of the 11 town hall events (55%) were focused on diversity issues.

35% of the 8 collaborating organizations represented nurses of color

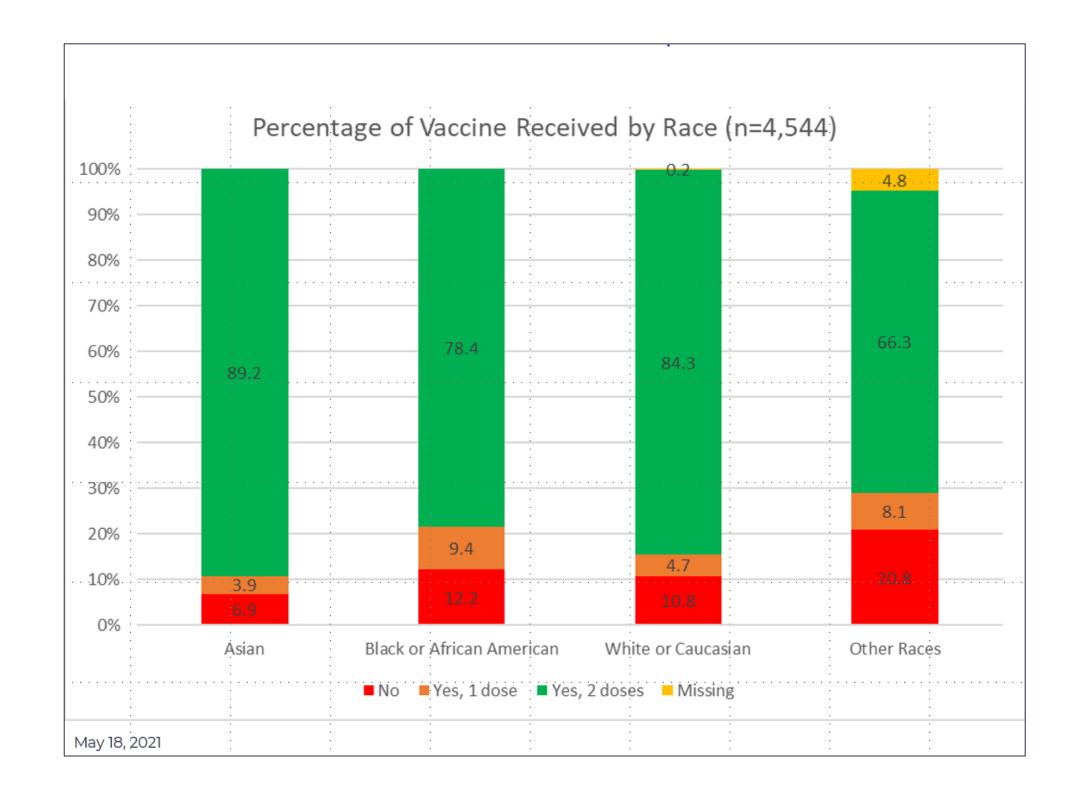

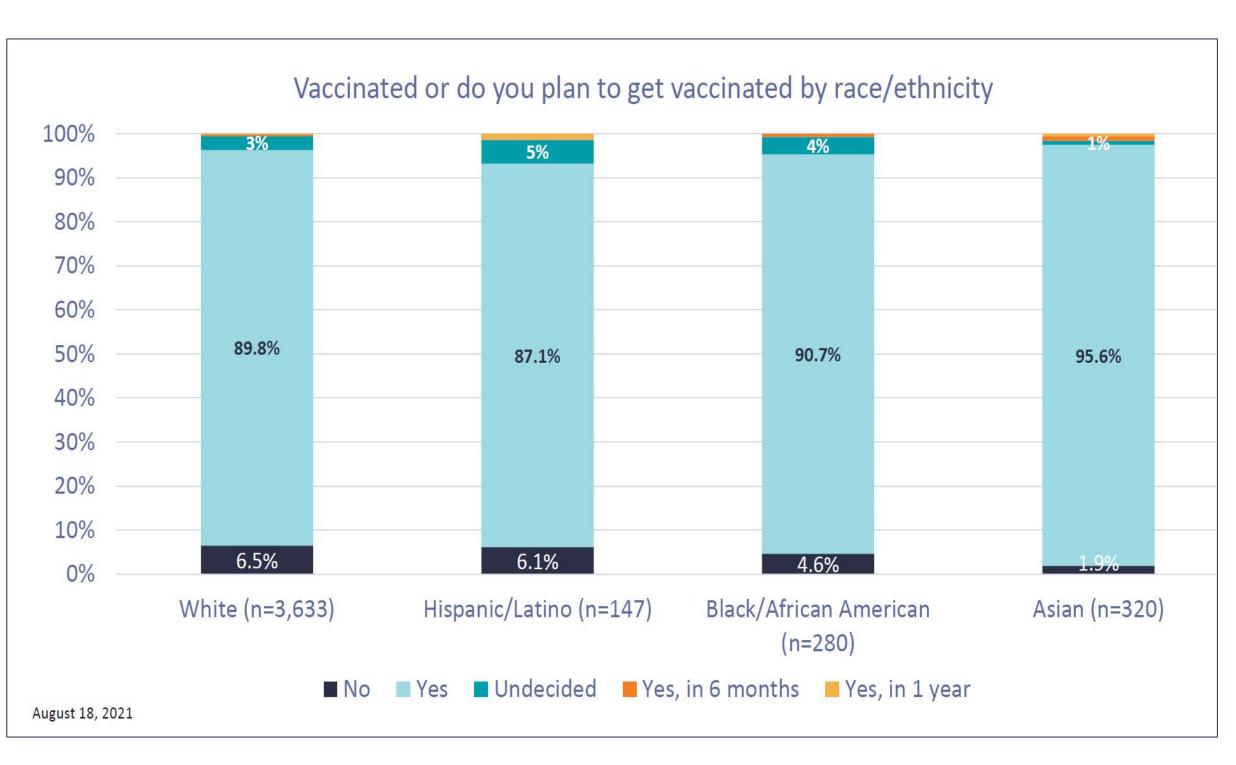

**AUDIENCE SPOTLIGHT** 

# Reaching BIPOC Nurses

Survey data from both April and August 2021 showed that there were only minor differences in vaccination rates by race/ethnicity.

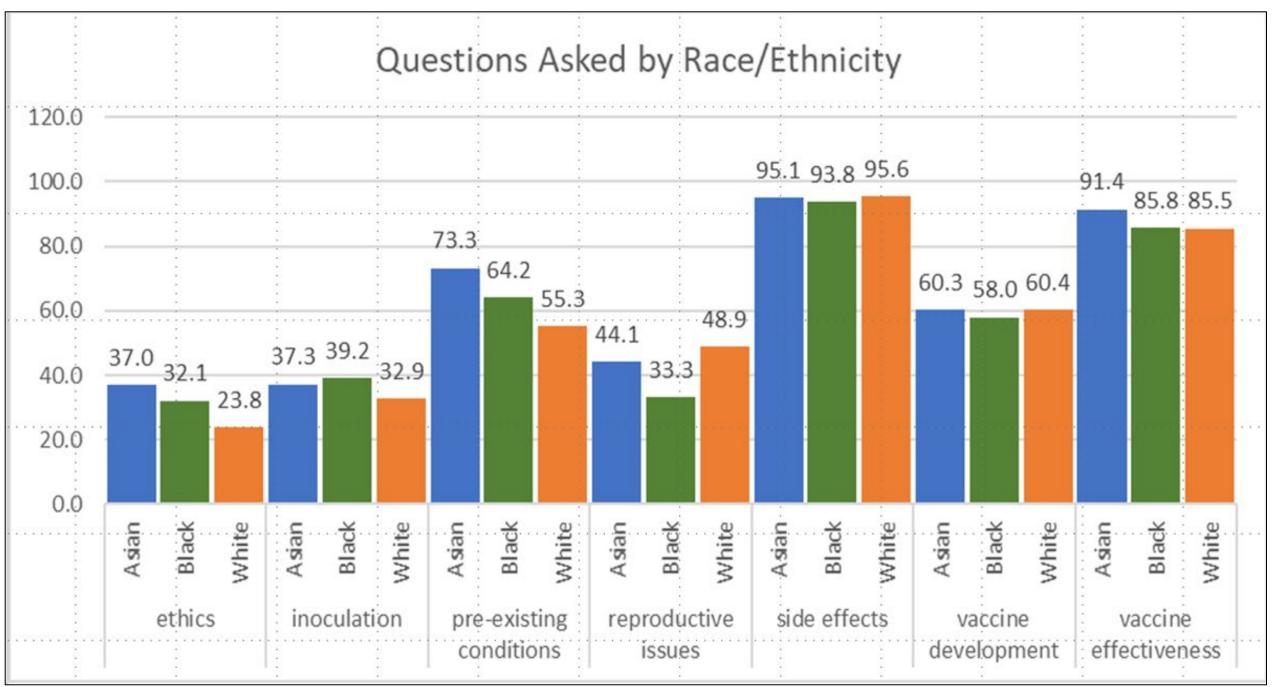

**AUDIENCE SPOTLIGHT** 

# Reaching BIPOC Nurses

The results of the initial program survey in April 2021 were examined by race/ethnicity. Nurses were asked what kinds of questions and concerns they were hearing from patients. While there are some differences within each category, the overall order of the topics was the same across race/ethnicity.

The campaign expressly using people and images that were representative across races and ethnicities. to provide information/answers that were meaningful and relevant. Most campaign assets were translated into Spanish and Tagalog.

Q. What types of questions are you asked about vaccination?

ANA and collaborating organizations developed a campaign communications strategy, identifying universal themes that would connect and resonate with nurses, healthcare providers, and the larger community.

These themes were validated and further refined using a survey to determine which areas most concerned the target audience related to the COVID-19 vaccines. Three overarching campaign topics were selected based on survey results to ground information and guide content.

Real Stories From Real Nurses

Nurses for Vaccines

# Science Behind Vaccines

With the rise of misinformation about the COVID-19 vaccines and the desire for reliable sources, nurses sought accurate, expert vaccine information for themselves and their patients. Science Behind Vaccines content was developed to address concerns and dispel myths.

To combat the vaccine misinformation on social media, a large majority of Science Behind Vaccines content was shared through Facebook and Twitter.

"In my role as an Occupational Health Nurse, I oversee employees in 6 states. The COVID Vaccine Facts for Nurses web site ensures that I have up-to-date information on the pandemic and expert perspectives about the safety, efficacy, and importance of COVID-19 vaccines."

- EILEEN MALONEY-WHITE, BSC, RN, LNC-CSP, COHN COHN(C), CCWS, FACLNC OCCUPATIONAL HEALTH NURSE

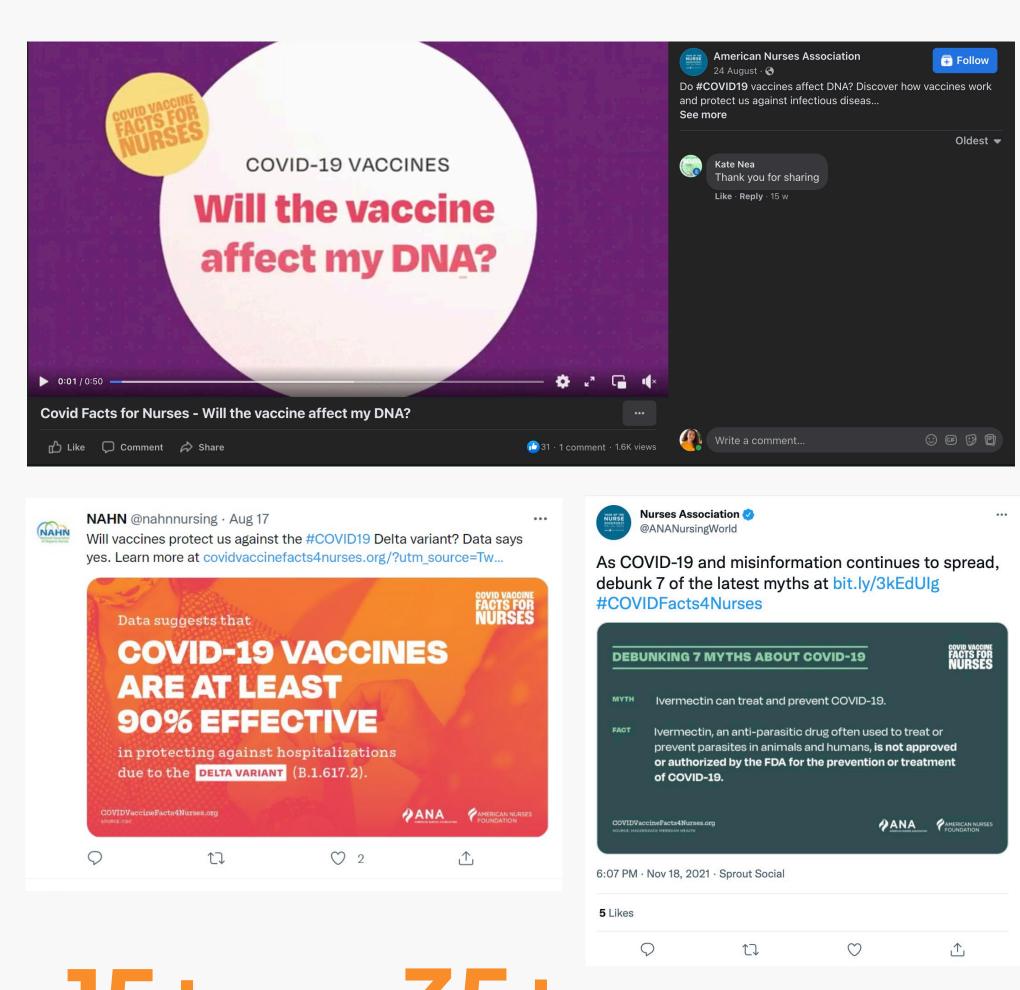

# Science Behind Vaccines

#### **Priority Topics:**

- Side effects/allergic reactions of the vaccine
- Pre-existing allergies
- Vaccine and fertility, pregnancy, and breastfeeding
- Vaccine immunity

"The COVID vaccine debate has become a political nightmare. Our patients deserve factual, nonpolitical information to make an informed decision. This site allows nurses or other caregivers to find factual, up to date information to help make those difficult choices."

- TAMMY CARUTHERS, ED.D, MSN, RN-BC CLINIC ADMISSION COORDINATOR FRONTIER BEHAVIORAL HEALTH PSYCHIATRIC SERVICES

# Real Stories From Real Nurses

Focus groups conducted with participating nurse organizations leading up to the launch of the CVF4N campaign clearly showed that nurses were compelled by other nurses' experiences. By sharing personal stores, nurses were enabled and empowered to connect with each other and their communities.

Authentic stories on Facebook and LinkedIn were shared to facilitate greater engagement between those telling their stories and their online communities.

"I think it's challenging to go and speak to someone about getting [vaccinated] but turning around in the next breath and say, "no, I didn't get [the vaccine]." So just being able to speak to concerns and share personal experience made it much easier to talk about and more receptive to receive."

- NURSE PARTICIPANT, RESEARCH AND DISCOVERY REPORT

# Real Stories From Real Nurses

#### **Priority Topics:**

- How nurses talk to patients about getting vaccinated
- Understanding variants and their impact on day-to-day work
- "As a nurse, who is "fully vaccinated", it is important to share my story of trepidation when I first learned of the vaccines with nurse colleagues. Should they voice their fears or skepticism, I show them the #CVF4N website and steer them to the FAQs as well as the other valuable COVID-19 evidence-based resources. I challenge them to be informed consumers, no different than their patients, with the hope that they will follow the science."
  - SHEILA CALDWELL, BSN, RN, CSN-NJ

## **Nurses For Vaccines**

American nurses work hard to provide their colleagues, patients, and communities with the resources needed to make informed vaccination decisions. Highlighting the work nurses within participating organizations and the nursing network at large provided inspiration and amplification for frontline nurses to address vaccine hesitancy within their communities.

Nurses For Vaccines content was primarily shared on Twitter and LinkedIn where there is space for educated discourse on social issues.

"School nurses are among the public health nurses who are most vital to controlling COVID-19, including our work in infection control and vaccine rollout. I've started a science first campaign here in Illinois, lead by IASN, to promote and educate the public about the importance of COVID-19 vaccines and have seen an increase in the uptake in my own community using COVID Vaccine Facts for Nurses."

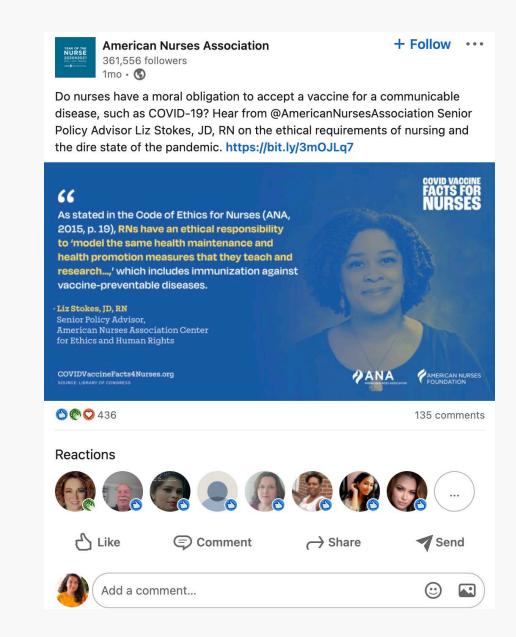

- GLORIA E. BARRERA, MSN, RN, PEL-CSN PRESIDENT, INTL ASSOCIATION OF SCHOOL NURSES

## Nurses For Vaccines

#### **Priority Topics:**

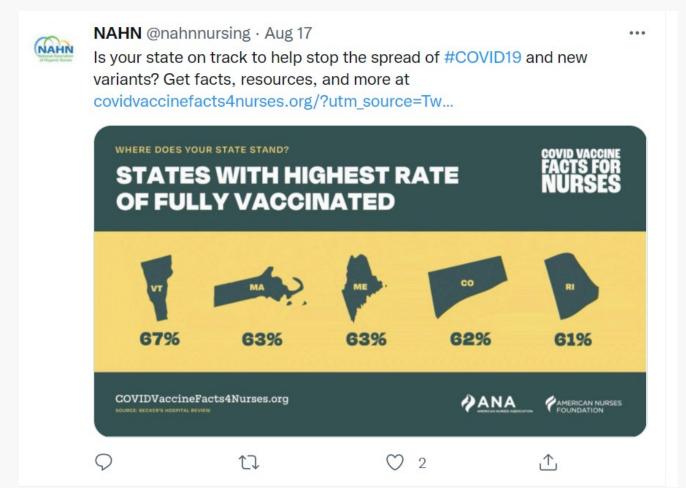

- Vaccine equity including access and historical atrocities that lead to hesitancy
- Vaccines as a way to reconnect with community

- "I shared this site with my nursing students because it was so informative. The webinar on Vaccine Hesitancy using the Model of Inference and the information therein was put to use immediately in their population health clinicals."
  - JOAN M. CALEY, MS, RN, ARNP, PHCNS-BC, NEA-BC

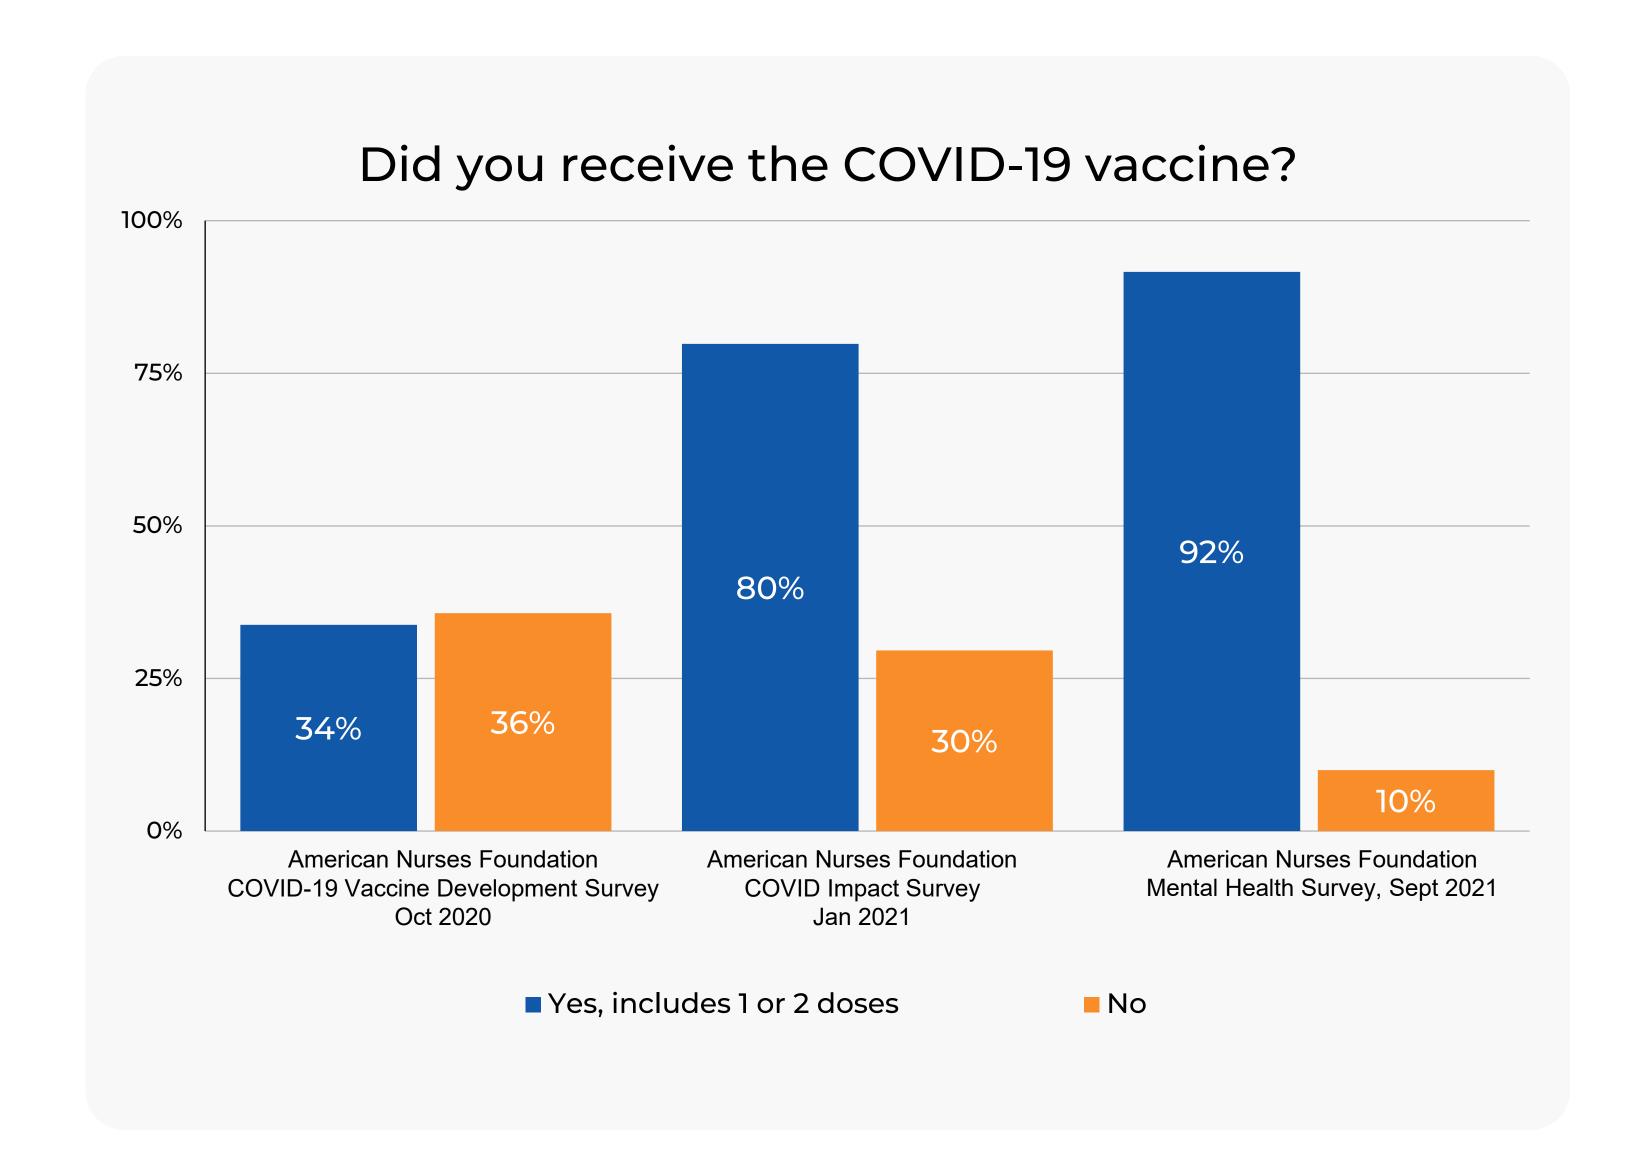

# Since the start of the CVF4N campaign, there has been a <u>sharp rise</u> in nurses receiving the COVID-19 vaccine.

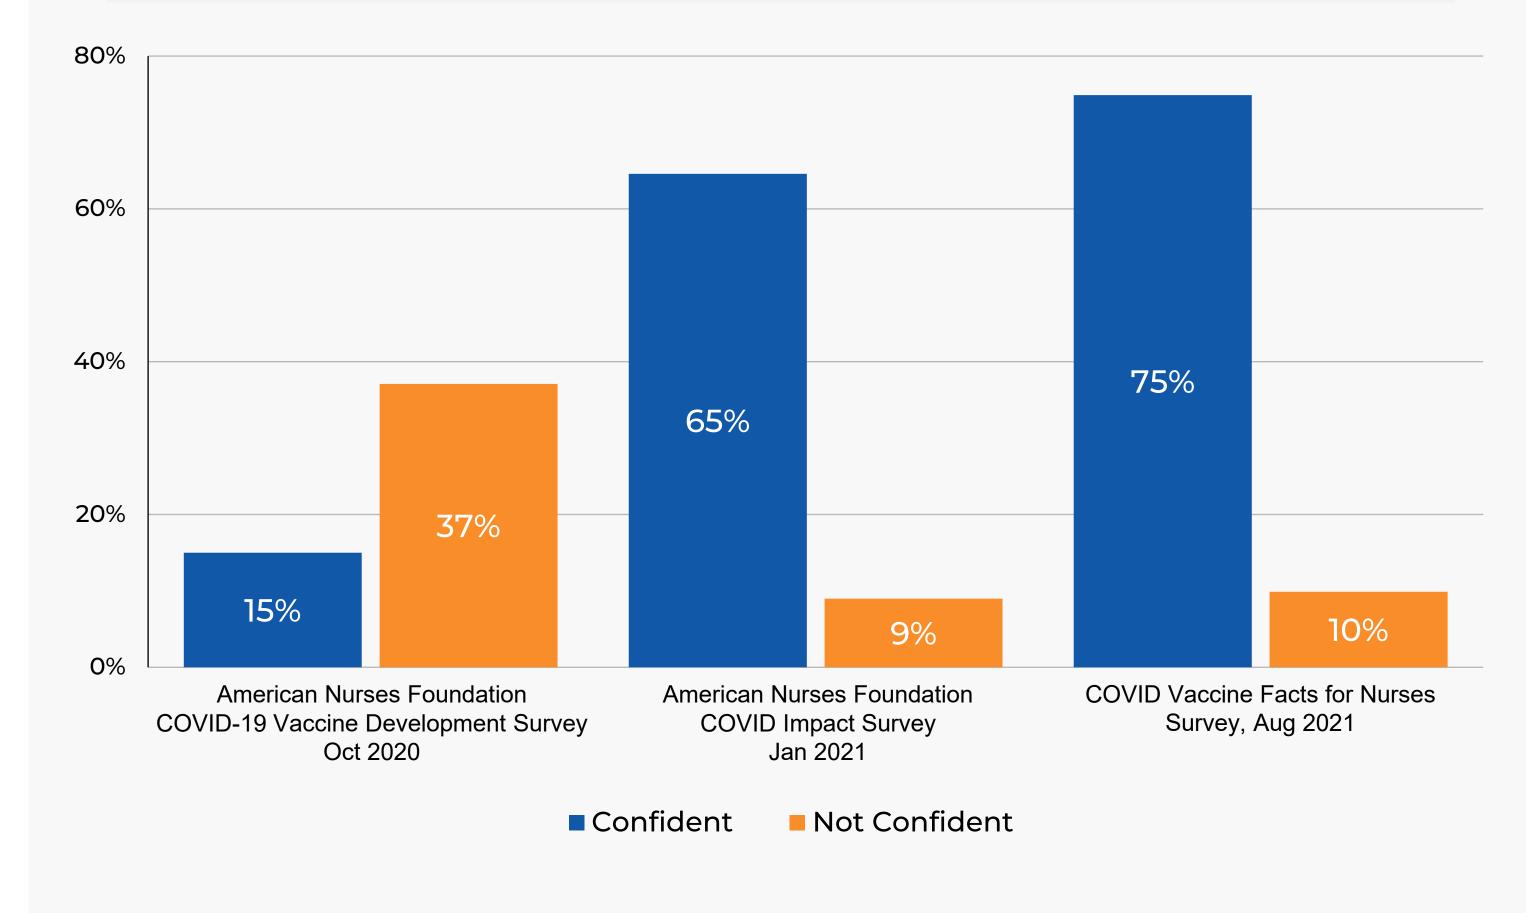

By arming nurses with the resources needed to make an educated decision about getting vaccinated and sharing their story and knowledge with patients and colleagues, the COVID Vaccine Facts For Nurses campaign contributed to the larger movement to stop the spread of COVID-19.

# Nurses are Vaccinated.

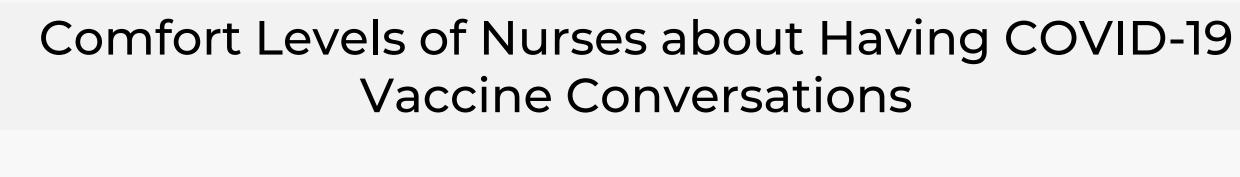

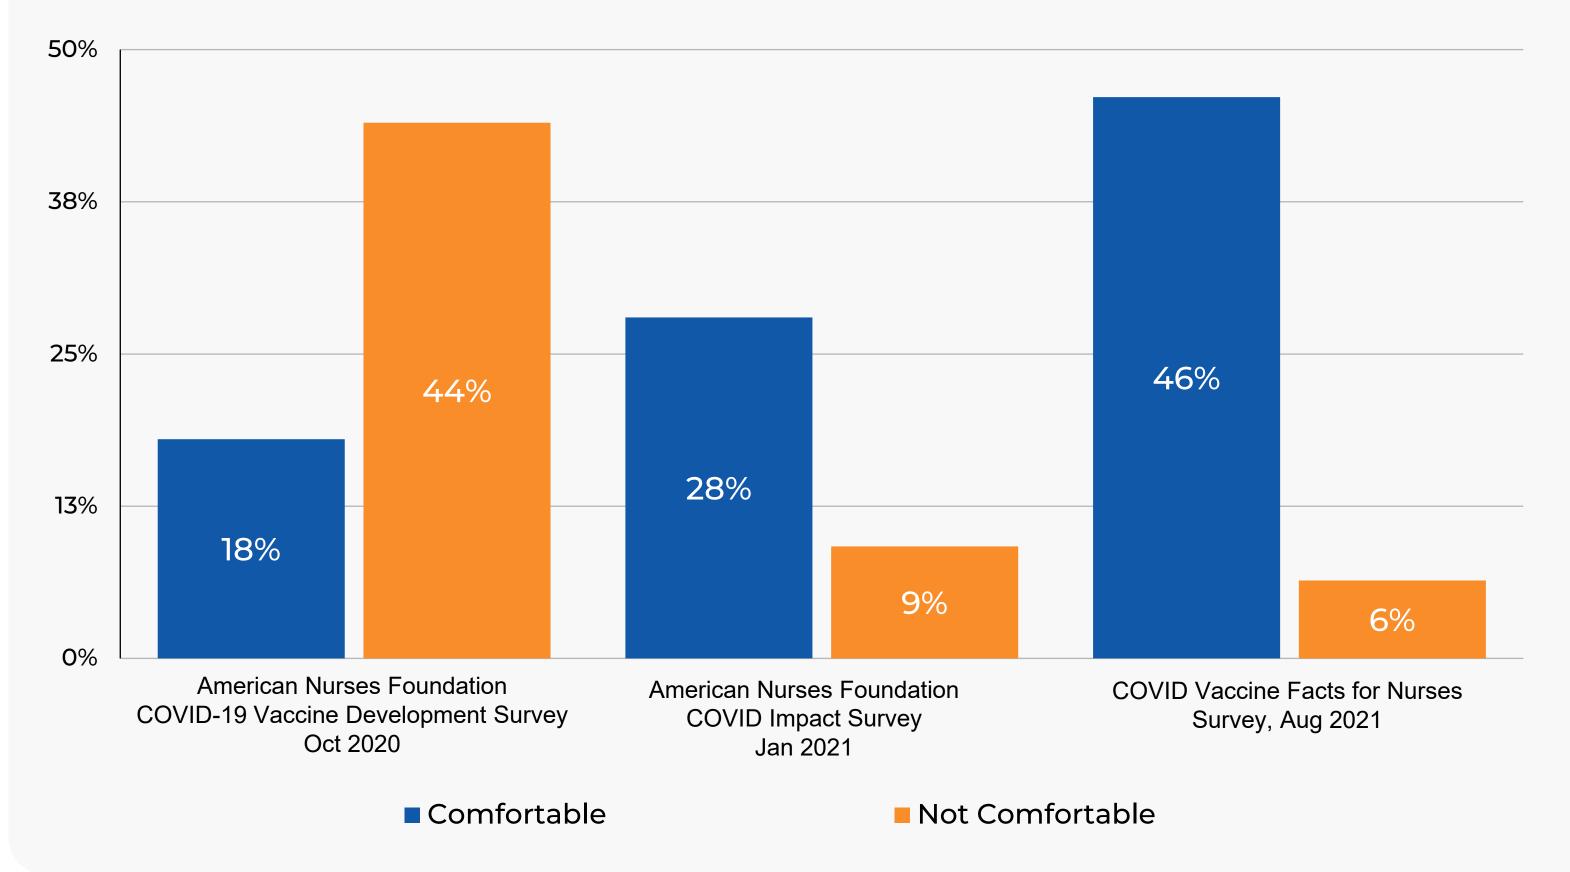

# Nurses think COVID vaccines are safe and effective.

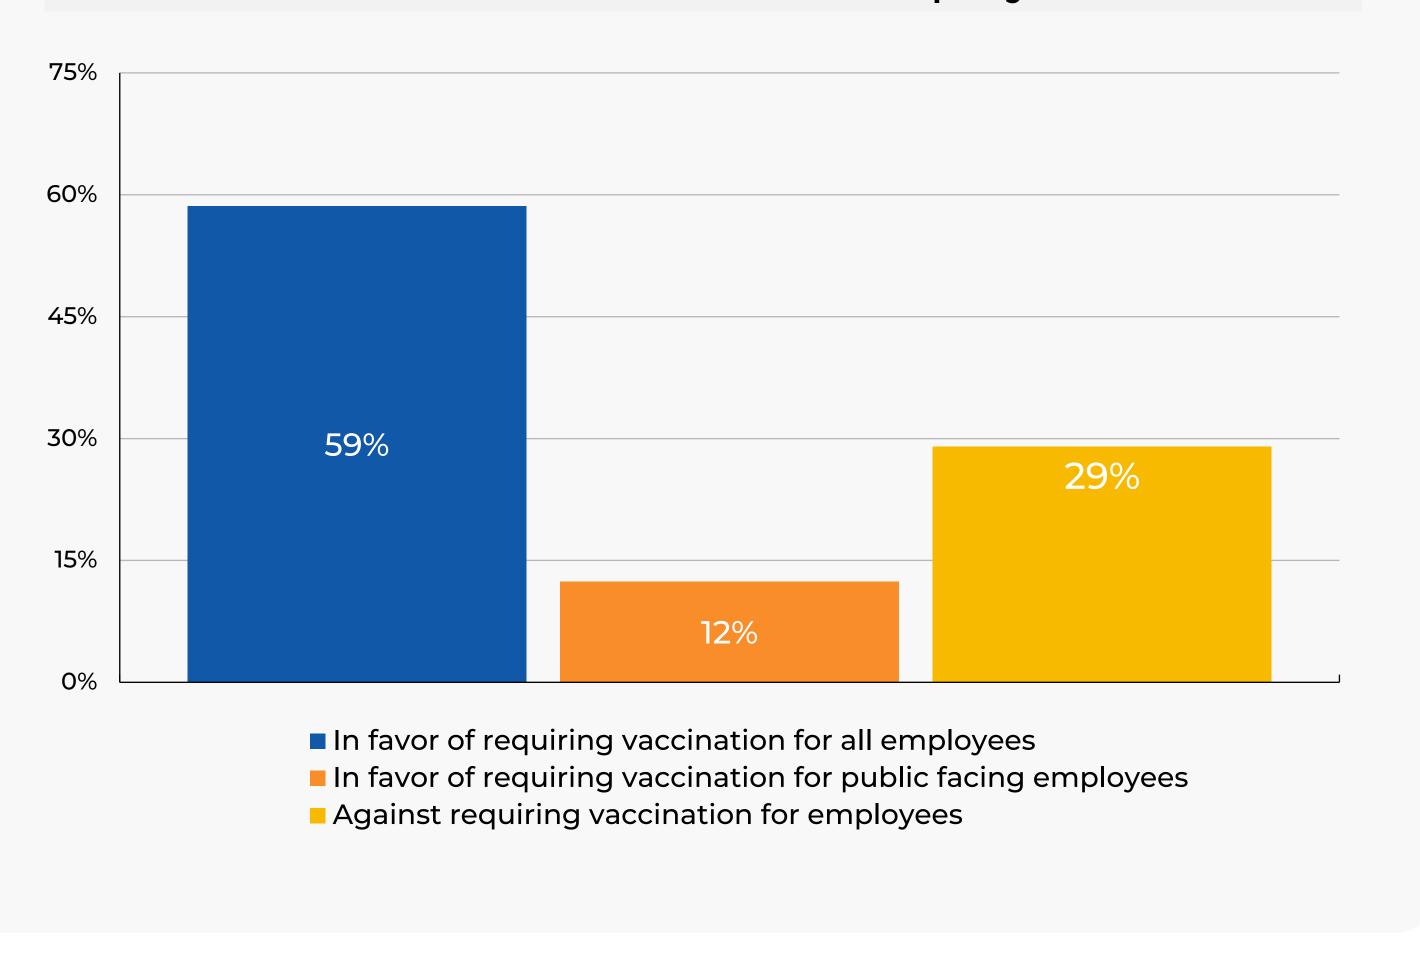

# Nurses are comfortable discussing the vaccine.

# Nurses have mixed feelings about vaccine mandates.

# How do you feel about employers requiring vaccination for continued employment?

# Concerns/Ongoing questions about the COVID-19 vaccine\*

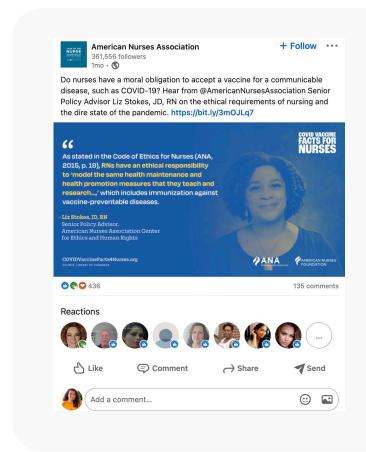

#### Data pulled from:

American Nurses Foundation COVID-19 Vaccine Development Survey, Oct 2020 American Nurses Foundation Innovation Survey, Oct 2020 American Nurses Foundation COVID Impact Survey, Jan 2021 COVID Vaccine Facts for Nurses Survey, April 2021 COVID Vaccine Facts for Nurses Survey, August 2021

## In hindsight, what could have been done differently:

Used more time at the beginning of the program to add functionality and sophistication to the microsite platform rather than focusing on speed of standing up the system

Created a more detailed production schedule for the campaign deliverables

Decided on metrics, data, and reporting preferences at the start of the campaign

Written more specific expectations into the collaborator agreements

### Most proud of the . . .

Impact,
reach,
and results

stemming from true collaboration – in message, images, dialog, and collegiality – across 23 different nursing and public health organizations.

# With the launch of COVID-19 vaccines at the start of 2021, nurses in America faced more COVID-19 cases and deaths than anywhere else around the world.

CDC data (as of December 2021) shows nearly 78% of eligible Americans have received at least one vaccination shot, with nurse vaccinations increasing from 40% to 88% since the beginning of the COVID Vaccine Facts for Nurses campaign.

Additionally, early data from the CVF4N survey in July 2020 told a promising story as Americans lined-up for booster shots and more than 67% of nurse-parents plan to vaccinate their children (ages 5-11).

40% -- 88%

Increase in Nurse Vaccinations since the beginning of the COVID Vaccine Facts for Nurses Campaign
